v0.0.1 from 2024/02/09

## Abstract

The LaTeX package `catppuccinPalette` provides new colors for `xcolor`.

## 1 Introduction

Catppuccin<sup>1</sup> is a nice pastel theme in 4 flavours/styles (*Latte*, *Frappé*, *Macchiato*, *Mocha*). This package defines these themes as `xcolor` colors.

## 2 Usage

Just use the new colors (prefixed with `Cat<Style>`) like normal `xcolor`s. In addition to the usual colors of the palette, this package defines some colors according to the style guide<sup>2</sup> for ease of use.

This package also allows you to set a specific style which sets the shortened color names (prefixed only with `Cat`) to the selected style (allows for easy switching style) via the package option `style`.

This package loads `xcolor` (without options) so if you want to set some `xcolor` options you should load `xcolor` before loading this package.

### 2.1 Package options

<i>Option</i>	<i>Description</i>
<code>style</code>	set the style used by the shortened prefix ( <code>Cat</code> ). Possible values: <code>Latte</code> (default+initial), <code>latte</code> , <code>Frappé</code> , <code>frappe</code> , <code>Mocha</code> , <code>mocha</code>
<code>textcolor</code>	set the default textcolor of the document to <code>CatText</code> . Possible values: <code>false</code> (default+initial), <code>true</code>
<code>pagecolor</code>	set the pagecolor of the document to <code>CatBackground</code> . Possible values: <code>false</code> (default+initial), <code>true</code>
<code>styleAll</code>	shortcut for setting <code>pagecolor</code> and <code>textcolor</code>
